Note: Each practical syllabus consists of two parts. From part-1, three problems will be given. Student has to answer any 2 problems. From part-2, two problems will be given. Student has to answer any one problem.

Production of **Record** is compulsory in student’s own hand writing. Periodically got signed by concerned lecturer, after completion of each topic.

***
Paper-I: **Descriptive Statistics and Probability**

[4 HPW :: 4 Credits :: 100 Marks (External:80, Internal:20)]

**Unit-I**

**Descriptive Statistics**: Concept of primary and secondary data, Methods of collection and editing of primary data, Designing a questionnaire and a schedule, Sources and editing of secondary data, Classification and tabulation of data, Measures of central tendency (Arithmetic mean, median, mode, geometric mean and harmonic mean) with simple applications, Absolute and relative measures of dispersion (range, quartile deviation, mean deviation, standard deviation and variance) with simple applications, Importance of moments, central and non-central moments, their inter-relationships, Sheppard's correction for moments for grouped data, Measures of skewness based on quartiles and moments, kurtosis based on moments with real life examples.

**Unit-II**

**Probability**: Basic concepts of probability, deterministic and random experiments, trial, outcome, sample space, event, operations of events, mutually exclusive and exhaustive events, equally likely and favorable events with examples, Mathematical, Statistical and Axiomatic definitions of probability, their merits and demerits. Properties of probability based on axiomatic definition, Conditional probability and independence of events, Addition and multiplication theorems for ‘n’ events, Boole’s inequality and Bayes’ theorem, Problems on probability using counting methods and theorems.

**Unit-III**

**Random Variables**: Definition of random variable, discrete and continuous random variables, functions of random variables, probability mass function and probability density function with illustrations. Distribution function and its properties, Transformation of one-dimensional random variable (simple 1-1 functions only), Notion of bivariate random variable, bivariate distribution, statements of its properties, Joint, marginal and conditional distributions, Independence of random variables.

**Unit-IV**

**Mathematical Expectation**: Mathematical expectation of a function of a random variable, Raw and central moments, covariance using mathematical expectation with examples, Addition and multiplication theorems of expectation. Definitions of moment generating function (m.g.f), characteristic function (c.f), cumulant generating function (c.g.f), probability generating function (p.g.f) and statements of their properties with applications, Chebyshev’s and Cauchy-Schwartz’s inequalities and their applications.

B.A./B.Sc. (STATISTICS)
Semester Pattern Syllabus (CBCS)
w.e.f: Academic Year: 2019-20
(With Mathematics Combination)
(Examination at the end of Semester-I)

Practical-1
Descriptive Statistics and Probability
(2 HPW :: 1 Credit :: 25 Marks)

Part - 1 (Using calculator)
1. Graphical presentation of data (Histogram, frequency polygon, Ogives). s
2. Diagrammatic presentation of data (Bar and Pie).
4. Computation of coefficients of Skewness and Kurtosis – Karl Pearson’s, Bowley’s, $\beta_1$ and $\beta_2$.

Part - 2 (Using MS-Excel)
1. Basics of Excel- data entry, editing and saving, establishing and copying formulae, built in Functions in excel, copy and paste and exporting to MS word document.
2. Graphical presentation of data (Histogram, frequency polygon, Ogives) using MS-Excel
3. Diagrammatic presentation of data (Bar and Pie) using MS-Excel

(Examination at the end of Semester-II)

Paper-II: **Probability Distributions**
[4 HPW :: 4 Credits :: 100 Marks (External:80, Internal:20)]

**Unit-I**

*Discrete distributions – I*: Uniform and Bernoulli distributions: definitions, mean, variance and simple examples. Definition and derivation of probability mass functions of Binomial distribution, Poisson distribution, properties of these distributions: median, mode, m.g.f, c.g.f., p.g.f., c.f., and moments upto fourth order, reproductive property (wherever exists) and their real life applications. Poisson approximation to Binomial distribution.

**Unit-II**

*Discrete distributions – II*: Negative binomial, Geometric distributions: Definitions and real life applications, properties of these distributions: m.g.f, c.g.f., p.g.f., c.f. and moments upto fourth order, reproductive property (wherever exists), lack of memory property for Geometric distribution. Poisson approximation to Negative binomial distribution.

Hyper-geometric distribution: definition, real life applications, derivation of probability function, mean, variance. Binomial approximation to Hyper-geometric distribution.

**Unit-III**

*Continuous distributions – I*: Rectangular and Normal distributions – definition, properties such as m.g.f., c.g.f., c.f. and moments up to fourth order, reproductive property, wherever exists and their real life applications. Normal distribution as a limiting case of Binomial and Poisson distributions.

**Unit-IV**

*Continuous distributions – II*: Exponential, Gamma distributions - definition, properties: m.g.f., c.g.f., c.f. and moments upto fourth order, reproductive property (wherever exists) and their real life applications. Beta distribution of two kinds: Definitions, mean and variance. Cauchy distribution - Definition and c.f..

Definition of convergence in Law, in probability and with probability one or almost sure convergence. Definition of Weak Law of Large Numbers (WLLN) and Strong Law of Large numbers (SLLN). Definition of Central Limit Theorem (CLT) for identically and independently distributed (i.i.d) random variables with finite variance.

8. K.V.S. Sarma: Statistics Made Simple: Do it yourself on PC, PHI.
Practical-2

Probability Distributions
(2 HPW :: 1 Credit :: 25 Marks)

Part - 1 (Using calculator)

1. Fitting of Binomial distribution-Direct method.
2. Fitting of Binomial distribution-Recurrence relation Method.
3. Fitting of Poisson distribution-Direct method
5. Fitting of Negative Binomial distribution.
6. Fitting of Geometric distribution.
7. Fitting of Normal distribution-Areas method.

Part - 2 (Using MS-Excel)

1. Fitting of Binomial distribution-Direct method.
2. Fitting of Poisson distribution-Direct method.
3. Fitting of Normal distribution-Areas method.
4. Fitting of Exponential distribution.
5. Fitting of Cauchy distribution.
