BS 101 MT	ENGINEERING MATHEMATICS – I			
	L	T	P	C
Pre-requisites	3	-	-	3
Evaluation	SEE	60 Marks	CIE	40 Marks

**Course Objectives:**

- To Introduce the Concepts of Sequences, Series and their properties.
- To Study the Concepts of Mean Value Theorems.
- To Introduce the Concepts of Functions of Several Variables and its applications.
- To Introduce the Concepts of Multiple Integrals and its applications.
- To Study Vector Differential and Integral Calculus.

**Course Outcomes:**

On completion of this course, the student will be able to:

- Find the Nature of Sequences and Series.
- To Apply the Mean Value Theorem and to Find the Roots of Continuous Functions.
- To find the Maximum and Minimum Values of Multiple Variable Functions.
- Use the Knowledge of Multiple Integrals in Finding the Area and Volume of any Region Bounded by Given Curves.
- Apply the Knowledge of Vector Calculus to Find Line, Surface and Volume Integrals.

**UNIT – I****Sequences and Series**

Sequences, Series, General properties of series, Series of positive terms, Comparison tests, P- test, tests of Convergence, D'Alembert's ratio test, Raabe's test, Integral test, Cauchy's  $n^{\text{th}}$  root test, Alternating series, Series of positive and negative terms, Absolute convergence and Conditional convergence.

**UNIT – II****Calculus of One Variable**

Rolle's Theorem, Lagrange's, Cauchy's mean value theorems (without proof) Taylor's series, Curvature, Radius of curvature, Circle of curvature, Envelope of a family of curves, Evolutes and Involutives,

MGU, NLG, TS

  
**CHAIRPERSON**  
 Board of Studies In  
 Computer Science & Engineering  
 Mahatma Gandhi University, NLG-508 254

### UNIT- III

#### Multivariable Calculus (Differentiation)

Functions of two variables, Limits and continuity, Partial derivatives, Total differential and differentiability, Derivatives of composite and implicit functions(Chain rule), Change of variables, Jacobian Higher order partial derivatives, Taylor's series of functions of two variables, Maximum and minimum values of functions two variables, Lagrange's method of multipliers.

### UNIT - IV

#### Multivariable Calculus (Integration)

Double integrals, Change of order of integration, Triple integrals, Change of variables in integrals and applications-areas and volumes, Beta and Gamma functions.

### UNIT -V

#### Vector Calculus

Scalar and vector fields, Gradient of a scalar field, Directional derivative, Divergence and Curl of a vector field, Line, Surface and Volume integrals , Green's theorem in a plane, Gauss's divergence theorem, Stoke's theorem (without proofs )and their verification.

BS 101 CH	ENGINEERING CHEMISTRY			
Pre-requisites	L	T	P	C
	3	-	-	3
Evaluation	SEE	60 Marks	CIE	40 Marks

**Course Objectives:**

- Understand the fundamentals of application of water chemistry in industry and applications of principles of corrosion to minimize corrosion and associated problems.
- Gain the knowledge of application of Electrochemical principles to construct the electrodes for various purposes and the criterion for determination of feasibility of processes.
- Analyze and interpret the structure of molecules by applying basic principles of spectroscopy.
- Acquire knowledge of biopolymers used for medical purposes with various applications.
- Grasp the latest application of nanotechnology in various industries and Manufacturing different kinds of batteries.

**Course Outcomes:**

On completion of this course, the student will be able to :

- Attains knowledge about the disadvantages of hard water for domestic and industrial purposes. Also teaches the techniques of softening of hard water and treatment of water for drinking purpose and throws light on prevention of corrosion.
- Rationalize bulk properties and processes using thermodynamic considerations.
- Distinguishes the ranges of electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques.
- Analyze the basic methods of reactions of organic molecules and study their properties.
- Knowing about different batteries, fuel cells and their applications of nanomaterials.

MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

## UNIT - I

### WATER CHEMISTRY AND CORROSION (10L):

**Water chemistry:** Hardness of water-Types and units of hardness, estimation of temporary and permanent hardness of water by EDTA method. Alkalinity of water and its determination Water softening by Ion exchange and Reverse Osmosis methods. Boiler troubles-scales and sludge formation-causes, effects and prevention. Specifications of potable water. Water treatment for drinking purpose-coagulation, sedimentation, filtration, sterilization by Chlorination.

**Corrosion-** causes and its effects. Types of corrosion-Dry or Chemical corrosion and Wet or Electrochemical corrosion and their mechanism. Electro chemical corrosion and its types. Factors influencing rate of corrosion. **Corrosion control methods:** Cathodic protection methods- Sacrificial anodic and impressed current methods. Surface coating methods: Hot dipping- Galvanizing and Tinning.

## UNIT - II

### THERMODYNAMICS AND ELECTRO CHEMISTRY(10L):

**Thermodynamics:** Terminology of Thermodynamics, thermodynamic processes, Work done in Reversible isothermal and adiabatic processes, concept of entropy, physical significance of entropy, Work function, Gibbs free energy and their significance, variation of free energy with temperature and pressure, criteria of spontaneity in terms of entropy and free energy-Numerical

**Electrochemistry:** Electrochemical cells- Electrolytic and Galvanic cells-notation, cell reaction and cell potentials. Types of electrodes- Calomel, Quinhydrone and Glass electrodes. Determination of  $P^H$  of a solution by using Quinhydrone electrode. Thermodynamics of emf of cells-Nernst equation and its derivation. Application of Nernst equation to electrode potential and emf of cells. Numericals. Principles and applications of Potentiometric titrations.

## UNIT- III

### MOLECULAR STRUCTURES AND SPECTRO SCOPY(10L):

**Molecular Orbital Theory.** Linear Combination of Atomic Orbital's (LCAO).Molecular Orbital energy level diagrams of diatomic molecules- $O_2$ ,  $N_2$  and

NO.  
MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

### Description of Electromagnetic spectrum.

**Principles of UV-Visible Spectroscopy:** Statement of Beer-Lambert Law.

Absorption and intensity shifts: Bathochromic, Hypsochromic, Hyper chromic and Hypo chromic shifts with one example each. Principle and applications of UV Sensors.

**IR Spectroscopy:** Principle of IR Spectroscopy. IR active and IR inactive molecules (two examples each). Principle and applications of IR Sensors.

**NMR Spectroscopy:** Principle of  $H^1$ -NMR Spectroscopy. Multiplicity, Chemical Shift. Principle and Applications of MRI.

### UNIT – IV

**Polymers:** Introduction, Classification of polymers-Plastics, Fibres and Elastomers.

Preparation, properties and engineering applications of the following polymers:

Plastics: PVC and Bakelite Fibers: Nylon 6:6, and Dacron. Elastomers: Buna Sand Butyl Rubber.

**Conducting polymers:** Introduction. Mechanism of conduction in polymers. Intrinsic conducting polymers: Poly-acetylene and poly-aniline. Applications of conducting polymers

### UNIT –V

#### Energy Sources and Nanomaterials (8L)

**Batteries:** Primary batteries-Zn carbon battery. Secondary batteries-Pb- Acid battery and Ni- Cd battery. Lithium-ion batteries- advantages and applications.

**Fuel cells:** Concept of fuel cells and their advantages. Construction and working of  $H_2-O_2$  and methanol-Oxygen fuelcells.

**Solar cells:** Concept of solar energy conversion, photovoltaic cells.

**Nanomaterials:** Introduction Properties of nanomaterials. Synthesis of nanomaterials- Top down, Bottom up approach and Sol-gel method. Applications of nanomaterials.

#### Suggested Reading:

1. Jain & Jain, *Engineering chemistry*, Dhanpat Rai publishing Co., 16th Edition
2. B.L.Tembe, Kamaluddin and M.S.Krishnan, *Engineering Chemistry* (NPTEL Web- book)

HS 101 EG	COMMUNICATIVE ENGLISH				
Pre-requisite	English proficiency above B1 level as per the CEFR (Common European Framework of Reference) for languages	L	T	P	C
		3	-	-	3
Evaluation	SEE	60 Marks	CIE	40Marks	

### Course Objectives:

- Communicate clearly, accurately and appropriately
- Know and use verbal and non-verbal communication appropriately
- Infer information from texts
- Learn basic grammar of the English language
- Use appropriate idiomatic expressions, one word substitutes etc.

### Course Outcomes:

On completion of this course, the student will be able to :

- Heighten the awareness of correct usage of English grammar and vocabulary in writing and speaking besides improving their fluency and comprehensibility
- Develop their ability as critical readers and writers and will produce paragraphs independently on any context with coherence.
- Draft effective business letters and emails.
- Exercise critical reading skills by enhancing the quality of life and to support lifelong learning.
- Will produce short reports using the drafting process.

### UNIT – I

Importance of listening, Types of listening, Importance of communication, types of communication, styles of communication, Communication barriers, listening for specific purposes, Do' s and Don'ts of Listening, Discourse markers & linking words,

### UNIT – II

Homonyms, Homophones, Homographs, Synonyms and Antonyms, Concord. One-word substitutes, tenses. Auxiliary Verbs, Question Tags, Root words, Active and Passive voice.

MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

### UNIT – III

Importance of reading, reading Comprehensions, Types of Comprehension questions, reading skills-skimming, scanning, intensive and extensive reading, critical reading passages,

### UNIT- IV

Letter writing (Official Letter writing), Email Writing & Email Etiquette, Principles of Good Writing, (How to write Introduction and Conclusions for different types of writings) paragraph and precise writing, Essay writing

### UNIT – V

Redundancy. Listening to various texts-continued... (In language Lab Inferential passages) Effective presentation, Proverb Expansion through JAM, Idioms and Phrases, Common Errors- I, Common Errors-II

### Suggested Reading:

- Ashraf, M Rizvi. Effective Technical Communication. Tata McGraw-Hill, 2006.
- *Language and Life A Skills Approach*, Orient Black Swan, 2018
- Michael Swan, *Practical English Usage*. OUP, 1995.
- Meenakshi Raman and Sangeetha Sharma. *Technical Communication: Principles and Practice-II*, Oxford Uni. Press, 2011.
- Signger F L. (1975). *Engineering Mechanics Statics and Dynamics*, 3<sup>rd</sup> Edition, Harper Collins International Edition.

PC 101 CS	DIGITAL LOGIC DESIGN				
Pre-requisites		L	T	P	C
		3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks

**Course Objectives:**

- To introduce concepts of Boolean logic, Postulates and Boolean Theorems.
- To understand the logic minimization methods and to solve the Boolean logic expressions.
- To understand how to design the combinational and sequential circuits.
- To understand the state reduction methods for sequential circuits.

**Course Outcomes:**

On completion of this course, the student will be able to:

- To apply the concepts of Boolean logic, Postulates and Boolean Theorems to solve the Boolean expressions.
- To solve the Complex Boolean logic expressions using Minimization methods.
- To design the combinational circuits using basic gates.
- To apply state reduction methods to solve sequential circuits.

**UNIT – I**

**Boolean Algebra:** Axiomatic definition of Boolean Algebra Operators, Postulates and Theorems, Boolean Functions, Canonical Forms and Standard Forms, Simplification of Boolean Functions Using Theorems and Karnaugh Map Method.

**UNIT – II**

**Minimization of Switching Functions:** Quine-McCluskey Tabular Method, Determination of Prime Implicants and Essential Prime Implicants.

**Combinational Logic Design:** Single-Output and Multiple-Output Combinational Circuit Design, AND-OR, OR-AND and NAND/NOR Realizations, Exclusive-OR and Equivalence functions.

MGU, NLG, TS

  
**CHAIRPERSON**  
 Board of Studies In  
 Computer Science & Engineering  
 Mahatma Gandhi University, NLG-508 254

### UNIT- III

**Design of Combinational Logic Circuits:** Gate Level design of Small Scale Integration (SSI) circuits, Modular Combinational Logic Elements- Decoders, Encoders, Priority Encoders, Multiplexers and De-multiplexers.

**Design of Integer Arithmetic Circuits using Combinational Logic:** Integer Adders -Binary Adders: Half adder, Full adder, Subtractors: Half subtractor and Full subtractor.

### UNIT - IV

**Design of Combinational Circuits using Programmable Logic Devices (PLDs):** Programmable Read Only Memories (PROMs), Programmable Logic Arrays (PLAs), Programmable Array Logic (PAL) devices.

**Introduction to Sequential Circuit Elements:** Latch, Various types of Flip-Flops and their Excitation Tables.

### UNIT -V

**Models of Sequential Circuits:** Moore Machine and Mealy Machine, Analysis of Sequential Circuits, State Table and State Transition Diagrams.

**Design of Sequential Circuits:** Counters, Methods for Reduction of State Tables and State Assignments.

BS 151 CH	ENGINEERING CHEMISTRY LABORATORY				
Pre-requisites		L	T	P	C
		-	-	3	1.5
Evaluation	SEE	60 Marks	CIE	40 Marks	

**Course Objectives:**

- Determination of hardness of water by Complexometry.
- Determination of Alkalinity of water.
- Estimation of Acid by conductometry,  $P^H$  and Potentiometry.
- Verification of Beers law and estimation of  $KMnO_4$  by colorimetry.
- To determine the rate constant of reactions from concentration as a function of Time

**Course Outcomes:**

On completion of this course, the student will be able to :

- Estimate the strength of acids and ions present in unknown solution by conductometry,  $P^H$  metry and potentiometry.
- Estimate the concentration of ions present in unknown solution from the absorbance by colorimetric analysis.
- Conduct experiment to estimate hardness of industrial water.
- Conduct experiment to estimate alkalinity of sample water.
- Estimate the rate constants of reactions from concentration of reactants/products as a function of time.

**SYLLABUS:**

**Experiment - I**

Estimation of HCL by Conductometry.

**Experiment - II**

Estimation of Acetic Acid by Conductometry.

**Experiment - III**

Estimation of HCL by Potentiometry.

  
MGU, NLG, TS

  
**CHAIRPERSON**  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

**Experiment - IV**

Estimation of  $\text{KMnO}_4$  by Potentiometry

**Experiment - V**

Estimation of HCL by  $\text{P}^{\text{H}}$  metry.

**Experiment - VI**

Estimation of Acetic acid by  $\text{P}^{\text{H}}$  metry

**Experiment - VII**

Verification of Beer's law and Estimation of  $\text{KMnO}_4$  by colorimetry.

**Experiment - VIII**

Verification of Beer's law and Estimation of  $\text{CuSO}_4$  by colorimetry.

**Experiment - IX**

Determination of Partition Coefficient of Acetic acid in BuOH and water.

**Experiment - X**

Estimation of Total hardness of water by Complexometry.

**Experiment - XI**

Estimation of Permanent and Temporary hardness of water by Complexometry.

**Experiment - XII**

Determination of Order of Acid catalysed Hydrolysis of Methyl acetate reaction.

**Suggested Reading:**

1. Senior practical Physical chemistry by BD Khosla, A.Ghulati, VC.Garg., ,R.Chand and Co., New Delhi 10<sup>th</sup> ed. 2001.
2. Laboratory Manual in Engineering Chemistry, S.K. Bhasin and Sudha Rani Dhanpath Rai Publishing Co.,

HS 151 EG	COMMUNICATIVE ENGLISH LABORATORY				
Pre-requisites	English proficiency above B1 level as per the CEFR (Common European Framework of Reference) for languages.	L	T	P	C
		-	-	2	1
Evaluation	SEE	60 Marks	CIE	40 Marks	

### Course Objectives:

- Learn IPA and the transcription; using dictionary to decode phonetic transcription overcome the difficulties with sounds of English; self learning through CALL.
- Demonstrate use of English speech sounds, stress and intonation in day-to-day Situations/conversations/interactions
- Introducing oneself in various contexts : Social, Academic and Professional.
- Improve listening and understand various accents – GIE, RP and GenAm.
- Learn to participate in various contexts – extempore, Group discussion and presentations

### Course Outcomes:

On completion of this course, the student will be able to:

- Sensitize the nuances of English speech sounds with computer-assisted individualized and independent language learning.
- Use better pronunciation and right accent and intonation.
- Use functional English.
- Listen and speak effectively by understanding various accents.
- Increase possibilities of job prospects and communicate confidently

### UNIT -I

English Sound system: Sounds of English, Vowels, consonants, Using Dictionary to decode phonetic transcription, Transcription exercises with the help CALL (Computer aided language Lab)

MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 264

## UNIT -II

Stress and Intonation: Syllable, word stress and its importance, intonation-falling falling and rising tones.

## UNIT -III

Introduction and presentation skills: In social, formal, Academic and Professional context, JAM, Picture description/Prescription, Role plays: Use of Dialogues in various situations and settings, Occasions to give various presentations with emphasis on visual aids and body language.

## UNIT -IV

Listening comprehension: Listening to various accents, Listening practice and Exercises, Resume/CV writing

## UNIT -V

Group discussions: Types of group discussions, case studies, Do's and Don'ts of group discussion- Intensive practice., Interview skills- Mock Interviews

### Suggested Reading/Software:

- T.Bala subramanian. A Text book of English Phonetics for Indian Students. Macmillan,2008.

ES 151 ME	ENGINEERING GRAPHICS				
Pre-requisites		L	T	P	C
		2	-	4	4
Evaluation	SEE	60 Marks	CIE	40 Marks	

### Course Objectives:

- Introduction to fundamentals and need of AUTOCAD software drawings.
- Knowledge about various 2D command of AUTOCAD drawing applicable for drawing and printing options.
- Inputs on basic concepts of engineering drawing, lettering formats for analyzing various topics via. Conic Sections, Involutives.
- Awareness towards the various types of projections and the drawings of 2D and 3D views.
- Introduction to fundamentals and need of AUTOCAD software drawings.

### Course Outcomes:

On completion of this course, the student will be able to :

- Knowledge on the fundamentals of AUTOCAD 2D commands
- Application of basic principles of drawing and scales for representation of prototype objects.
- Relate the logic of projections to points, straight lines and various views of 2D and 3D objects.
- Capability to imagine and project the developed surface and truncated portion of 3D solids.
- Assimilation of visualization process to efficiently communicate ideas graphically and provide editable solutions.

### UNIT – I

Introduction to Engineering Drawing covering, Principles of Engineering Graphics and their significance, usage of Drawing instruments, lettering. Geometrical Constructions (General method only), Conic sections (General and special method); Cycloid, Epicycloid, Hypocycloid and Involute (line, triangle, square, circle, Regular

MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Jawahar Gandhi University, NLG-508 254

Polygons), Construction of Tangent and Normal to all General methods of Conic sections, Cycloid, Epicycloid, Hypocycloid and Involutés.

## UNIT – II

Overview of Computer Graphics: Listing the computer technologies that impact on graphical communication, demonstrating knowledge of the theory of CAD software, setting up of units and drawing limits; ISO and ANSI standards for coordinate dimensioning, Snap to objects manually and automatically; Drawings straight lines using various coordinate input entry methods, Applying various ways of drawing circles.

## UNIT – III

Commands, initial settings, Drawing basic entities, Modify commands, Text and Dimensioning, Blocks Applying dimensions to objects, applying annotations to drawings. Setting up and use of Layers, Create, edit and use customized layers; Changing line lengths through modifying existing lines (Extend/Lengthen); Printing Options

## UNIT – IV

Scales – Reduced and Enlarged scales, Representative Fraction, Problems - Plain, Diagonal and Vernier Scales, Projections of Points – projection when placed in different quadrants Projection of Straight lines– Projections when parallel to one plane, perpendicular to one plane, inclined to one plane and inclined to both planes.

## UNIT – V

Projections of Planes – Projections when parallel to one plane, perpendicular to one plane, inclined to one plane and inclined to both planes. Projections of Regular Solids –Projections covering those parallel to one plane, perpendicular to one plane, inclined to one plane and inclined to both planes. Sections of Solids - sectional Views of Right regular solids covering Prism, Cylinder, Pyramid, and Cone Development of surfaces of Right Regular Solids - Prism, Pyramid, Cylinder and Cone.

Electronics and Communication Engineering,  
Mahatma Gandhi University, NLG-508 2

BS 201 MT	ENGINEERING MATHEMATICS-II				
Pre-requisites		L	T	P	C
Evaluation	SEE	3	-	-	3
	60 Marks	CIE		40 Marks	

**Course Objectives:**

- To study Matrix Algebra and its use in solving System of Linear Equations and solving Eigen Value Problems.
- To study the First Order Linear and Non-Linear Ordinary Differential Equations.
- To study the Higher Order Linear Ordinary Differential Equations with Variable and Constant Coefficients.
- To introduce the Concept of Functions of Complex Variable and their Properties.
- To study the Values of Improper Integrals using Residue Theorem.

**Course Outcomes:**

On completion of this course, the student will be able to:

- Solve System of Linear Equations and Eigen Value Problems.
- Find the solution of First Order Ordinary Differential Equations.
- Identify the solution of Higher Order Ordinary Differential Equations.
- Determine the Analyticity and Integrals of Complex Functions.
- Evaluate Complex and Real Integrals Using Residue Theorem.

**UNIT – I**

**Matrices:** Elementary row and column operations, Rank of a matrix, Echelon form, System of linear equations, Linearly dependence and independence of vectors, Linear transformation, Orthogonal transformation, Eigen values, Eigenvectors, Properties of Eigen values, Cayley-Hamilton theorem, Quadratic forms, Diagonalization of Matrices, Reduction of quadratic form to canonical form by orthogonal transformation, Nature of quadratic forms.

MGU, NLG, TS

  
 CHAIRPERSON  
 Board of Studies In  
 Computer Science & Engineering

## UNIT – II

### **First Order Ordinary Differential Equations:**

Exact first order differential equations , Integrating factors, Linear first order equations, Bernoulli's, Riccati's and Clairaut's differential equations ,Orthogonal trajectories of a given family of curves.

## UNIT- III

**Differential Equations of Higher Orders :** Linear Independence and Dependence, Solutions of Second and Higher Order Linear Homogeneous Equations with Constants Coefficients, Method of Reduction of order for the Linear Homogeneous Second Order Differential Equations with Variable Coefficients , Solutions of Non- Homogeneous Linear Differential Equations, Method of Variation of Parameters, Solution of Euler-Cauchy Equation, Simultaneous Linear Differential Equations.

## UNIT – IV

**Functions of a Complex Variable:** Limits and Continuity of a Function, Differentiability and Analyticity, Elementary Analytic Functions, Necessary and Sufficient Conditions for a Function to be Analytic, Cauchy-Riemann Equations in Polar form, Harmonic Functions, Complex Integration, Cauchy's Integral Theorem, Extension of Cauchy's Integral Theorem for multiply connected regions, Cauchy's Integral Formula, Cauchy's Formula for Derivatives

## UNIT –V

**Residue Calculus:** Power Series, Taylor's Series, Laurent's Series, Zeros and Singularities, Residues, Residue Theorem, Evaluation of Real Integrals Using Residue Theorem, Bilinear Transformations (All Theorems without Proof).

### **Suggested Reading:**

- R.K. Jain & S.R.K. Iyengar, *Advanced Engineering Mathematics*, Narosa Publications, 4<sup>th</sup> Edition, 2014.
- Erwin Kreyszig, *Advanced Engineering Mathematics*, John Wiley, 9<sup>th</sup> Edition, 2012.
- Dr.B.S.Grewal, *Higher Engineering Mathematics*, Khanna Publications, 43<sup>rd</sup>

- H.K. Dass, Er. Rajnish Varma, *Higher Engineering Mathematics*, Schand Technical Third Edition

BS 201 PH	ENGINEERING PHYSICS					
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40Marks	

**Course Objectives:**

The course is taught with the objectives of enabling the student to:

- Understand the basic concepts of matter waves and experimental implications. To understand Schrodinger's wave equation and its implications.
- Appraise significance of stimulated emission and laser light production. Subsequently propagation of laser light through waveguides.
- Understand the formation of energy bands and classification of the solids based on the band theory. To understand the concept of superconductors.
- Understand implications of basic laws of electricity and magnetism to know the significance of techniques of Modern Optics.
- Sensitize towards nanomaterial and appraise the various characterization techniques.

**Course Outcomes:**

On completion of this course, the student will be able to :

- Enrich and *understand* concepts and real time applications of mater waves and implications of matter waves as quantum mechanics evolution.
- Understand construction and working of the laser systems and *apply* them to Propagate through fiber optical cable as cutting edge application.
- *Analyze* semiconducting materials, superconducting materials, basic laws of electricity and magnetism to know the significance of techniques of Modern Optics.
- *Evaluate* the different material characterization techniques.
- Appreciate significance of nanomaterials and *create* desired properties by using various methods of synthesis processes.

**UNIT – I**

**Matter waves:** de-Broglie hypothesis – properties of matter waves – Davison and Germer's experiment – G.P. Thomson experiment – Uncertainty principle.

MGU, NLG, TS

**CHAIRPERSON**  
 Board of Studies In  
 Computer Science & Engineering  
 Mahatma Gandhi University, NLG-508 254

**Quantum Mechanics:** Physical significance of wave function–Schrodinger's time independent and time dependent wave equation– Particle in 1-D box– Wave function, Probability function, energy level.

## UNIT – II

**Electromagnetic Theory:** Basic laws of electricity and magnetism – Derivation of Maxwell's equations in integral and differential forms - Conduction and displacement current –modification of Ampere's law - Relation between Displacement Current (D), Electric Intensity (E) and Polarization (P) - Equation of plane wave in free space – Poynting theorem.

**Modern Optics:** Interference – Newton's Rings by reflected light – Experimental arrangement. Types of diffraction – diffraction grating (Conditions of maxima and minima) – Resolving power of grating –Types of polarized light – Polarization by reflection – Malus law – Double refraction – Nicol's Prism. – Optical activity and polarimeter.

## UNIT– III

**Lasers:** Characteristics of lasers – Absorption of radiation, spontaneous and stimulated emission of radiation - Einstein's coefficients and their relation - Population inversion– Types of lasers - Ruby laser, Helium-Neon laser and Semiconductor laser – Applications of lasers

**FibreOptics:** Construction of an optical fiber – Propagation of light through an optical fiber-Acceptance angle - Numerical aperture – Types of optical fibers (Based on number of modes and refractive index profile) – Fibre drawing process (double crucible method)-Applications of optical fibers.

## UNIT– IV

**Semiconductor Physics:** Classification of materials based on band theory - Kronig-Penney model (qualitative treatment) - Energy band formation in solids - Intrinsic and Extrinsic semiconductors - Concept of a hole - Carrier concentration and conductivity in intrinsic semiconductors – Formation of P-N junction diode, Zenor diode, Light Emitting Diode and their I-V characteristics – Thermistor and its characteristics - Hall effect and its applications.

MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In

Computer Science & Engineering,  
Mahatma Gandhi University, NLG-508 254

**Superconductivity:** Introduction - General properties of super conductors - Meissner effect  
Type -I and Type- II superconductors - BCS theory (qualitative) – Introduction to High  $T_c$   
Super conductors - Applications of superconductors.

#### UNIT – V

**Nanomaterials:** Introduction - Properties of materials at reduced size - Surface to volume  
ratio – Quantum confinement effect – Classification of nanomaterials - Preparation of  
nanomaterials: bottom–up methods (e.g., Sol Gel method and Chemical Vapor Deposition  
method), Top-down methods (e.g., Ball milling method) - Basic ideas of carbon nanotubes  
– Applications of nanomaterials and their health hazards.

**Techniques for Characterization:** Morphological studies of materials – X-ray Diffraction  
(XRD), Scanning Electron Microscopy (SEM). Spectroscopic studies of materials – Fourier  
Transform Infrared (FTIR), Beer's law, UV-Visible and Raman spectroscopy.

#### Suggested Reading:

- M.S. Avadhanulu and P.G. Kshirasagar - Engg. Physics, S.Chand& Co.
- C.M. Srivastava and C. Srinivasan - Science of Engg. Materials, New Age International.
- R.K. Gour and S.L. Gupta – Engg. Physics, Dhanpat Rai Publications.
- B.K. Pandey and S.Chaturvedi – Engineering Physics, Cengage Learning.
- A.K Bhandhopadhyaya - Nano Materials, New Age International.
- S.K. Sharma, et al., Hand book of Material Characterization – Springer.

ES 201 CS	PROGRAMMING FOR PROBLEM SOLVING					
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

**Course Objectives:**

- To introduce the basic concepts of Computing environment, number systems and flowcharts.
- To familiarize the basic constructs of C language – data types , operators and expressions.
- To understand modular and structured programming constructs in C.
- To learn the usage of structured data types and memory management using pointers.
- To learn the concepts of data handling using files.
- 

**Course Outcomes:**

On completion of this course, the student will be able to:

- Explain various functional components in computing environment
- Develop algorithmic solutions to problems and draw the flow charts
- Explain and use basic constructs of C in writing simple programs
- Use standard library functions in C and develop modular programs using user defined functions and structured data types

**UNIT – I**

**Introduction to Computers:** Computer Systems, Computing Environments, Computer Languages, Creating and Running Programs, Software Development, Flow charts. **Number Systems:** Binary, Octal, Decimal and Hexadecimal.

**Introduction to C Language -** Background, C Programs, Identifiers, Data Types, Variables, Constants, Input / Output Statements

**Arithmetic Operators and Expressions:** Evaluating Expressions, Precedence and Associativity of Operators, Type Conversions.

MGU, NLG, TS

  
 CHAIRPERSON  
 Board of Studies In  
 Computer Science & Engineering  
 Mahatma Gandhi University, NLG-508 254

## UNIT – II

**Conditional Control Statements:** Bitwise Operators, Relational and Logical Operators, If, If-Else, Switch-Statement and Examples. Loop Control Statements: For, While, Do-While and Examples. Continue, Break and Go to statements

**Functions:** Function Basics, User-defined Functions, Inter Function Communication, Standard Functions, Methods of Parameter Passing.

**Recursion-** Recursive Functions.

**Storage Classes:** Auto, Register, Static, Extern, Scope Rules, and Type Qualifiers

## UNIT– III

**Preprocessors:** Preprocessor Commands

**Arrays** - Concepts, Using Arrays in C, Inter-Function Communication, Array Applications, Two- Dimensional Arrays, Multidimensional Arrays, Linear and Binary Search, Selection and Bubble Sort

## UNIT – IV

**Pointers** - Introduction, Pointers for Inter-Function Communication, Pointers to Pointers, Compatibility, L -value and R-value, Arrays and Pointers, Pointer Arithmetic and Arrays, Passing an Array to a Function, Memory Allocation Functions, Array of Pointers, Programming Applications, Pointers to void, Pointers to Functions, Command-line Arguments.

**Strings** - Concepts, C Strings, String Input/Output Functions, Arrays of Strings, String Manipulation Functions

## UNIT –V

**Structures:** Definition and Initialization of Structures, Accessing Structures, Nested Structures, Arrays of Structures, Structures and Functions, Pointers to Structures, Self Referential Structures, Unions, Type Definition (typedef), Enumerated Types.

**Input and Output:** Introduction to Files, Modes of Files, Streams, Standard Library Input/Output Functions, Character Input/Output Functions.

ES 201 EE	BASIC ELECTRICAL ENGINEERING					
Pre-requisites			L	T	P	C
			3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

**Course Objectives:**

- To understand the fundamentals of DC and AC electrical circuits.
- To understand the working principles of DC motor, DC generator, Transformers and single phase induction motors.
- To understand working principles of protection devices used in electrical circuits.

**Course Outcomes:**

On completion of this course, the student will be able to:

- Analyze the performance of simple electrical circuits exciting with DC and AC excitations.
- Apply different theorems to solve complicated electrical circuits to obtain the current, voltage and power.
- Understand the main components, Characteristics, applications of different DC and AC electrical machines used in industry.
- Understand the importance of protective devices and their rating used in electrical circuits.
- Obtain the overall understanding of basic electrical circuits and appliances required for any industry.

**UNIT – I**

**DC Circuits :** Electrical circuit elements (R, L and C), voltage and current sources, Kirchoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems.

**UNIT – II**

**AC Circuits:** Representation of sinusoidal waveforms, peak and rms values, phasor

MGU, NLG, TS  

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

representation, real power, reactive power, apparent power, power factor. Analysis of single-phase ac circuits consisting of R, L, C, and RL, RC, RLC combinations (series only). Three phase balanced circuits, voltage and current relations in star and delta connections.

### UNIT- III

#### Transformers and 3-ph Induction Motors

**Transformers :** Electromagnetic induction, Faradays laws, Statically induced emf, Lenz law, BH characteristics, ideal and practical transformer, losses and efficiency, Auto-transformer and three-phase transformer connections.

**Three Phase Induction motor:** Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, squirrel cage IM, slip-ring IM, Applications.

### UNIT - IV

#### Single-phase induction motor & DC Machines

**Single-phase induction motor:** Construction and principle of operation, Capacitor start & capacitor run motor, applications.

**DC Generators:** Dynamically induced emf, Flemming's Right hand and Left hand rules, Construction and principle of operation of DC generator, EMF equation, Types of DC Generators, OCC characteristics, applications.

### UNIT - V

**Electrical Installations:** Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB, Types of Wires and Cables, Earthing. Types of Batteries, Important Characteristics for Batteries. Elementary calculations for energy consumption, power factor improvement and battery backup.

PC 201 CS	DISCRETE MATHEMATICS				
Pre-requisites		L	T	P	C
		3	-	-	3
Evaluation	SEE	60 Marks	CIE		40 Marks

**Course Objectives:**

- Use mathematically correct terminology and notation.
- Construct correct direct and indirect proofs.
- Use division into cases in a proof.
- Use counter examples.
- Apply logical reasoning to solve a variety of problems.

**Course Outcomes:**

On completion of this course, the student will be able to:

- For a given logic sentence express it in terms of predicates, quantifiers, and logical connectives.
- For a given a problem, derive the solution using deductive logic and prove the solution based on logical inference.
- For a given a mathematical problem, classify its algebraic structure.
- Evaluate Boolean functions and simplify expressions using the properties of Boolean algebra.
- Develop the given problem as graph networks and solve with techniques of graph theory.

**UNIT – I**

**Sets, Relation and Function:** Operations and Laws of Sets, Cartesian Products, Binary Relation, Partial Ordering Relation, Equivalence Relation, Image of a Set, Sum and Product of Functions, Bijective functions, Inverse and Composite Function, Size of a Set, Finite and infinite Sets, Countable and uncountable Sets, Cantor's diagonal argument and The Power Set theorem, Schroeder-Bernstein theorem.

**Principles of Mathematical Induction:** The Well-Ordering Principle, Recursive definition, The Division algorithm: Prime Numbers, The Greatest

MGU, NLG, TS

CHAIRPERSON  
Board of Studies in  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

Common Divisor: Euclidean Algorithm, The Fundamental Theorem of Arithmetic.

#### UNIT – II

Basic counting techniques-inclusion and exclusion, pigeon-hole principle, permutation and combination, generating functions.

#### UNIT– III

**Propositional Logic:** Syntax, Semantics, Validity and Satisfiability, Basic Connectives and Truth Tables, Logical Equivalence: The Laws of Logic, Logical Implication, Rules of Inference, The use of Quantifiers.

**Proof Techniques:** Some Terminology, Proof Methods and Strategies, Forward Proof, Proof by Contradiction, Proof by Contraposition, Proof of Necessity and Sufficiency.

#### UNIT – IV

**Algebraic Structures and Morphism:** Algebraic Structures with one Binary Operation, Semi Groups, Monoids, Groups, Congruence Relation and Quotient Structures, Free and Cyclic Monoids and Groups, Permutation Groups, Substructures, Normal Subgroups,

#### UNIT – V

Algebraic Structures with two Binary Operation, Rings, Integral Domain and Fields. Boolean algebra and Boolean Ring, Identities of Boolean Algebra, Duality, Representation of Boolean Function, Disjunctive and Conjunctive Normal Form.

BS 251 PH	ENGINEERING PHYSICS LAB				
Pre-requisites	Strength of Materials	L	T	P	C
		-	-	3	1.5
Evaluation	SEE	60 Marks	CIE	40 Marks	

**Course Objectives:**

- Demonstrate an ability to make physical measurements and understand the limits of precision in measurements.
- Demonstrate the ability to use experimental statistics to determine the precision of a series of measurements.
- Demonstrate the ability to understand optical / Semiconducting / dielectric properties of materials.
- Demonstrate the ability to understand the construction and working of different experiments

**Course Outcomes :**

On completion of this course, the student will be able to :

- Recognize the transformation concepts into practical's.
- Use a best fit to create a graph from a series of data points. Students can extrapolate and interpolate.
- Appreciate the mathematical abilities to meaningful physical conclusions.
- Develop skills to impart practical knowledge in real time solution and learn to design new instruments with practical knowledge.
- Understand the link between theory and practicals

**Experiment - I**

To calculate the Numerical aperture (NA), acceptance angle of a given optical fibre

**Experiment - II**

Determination of wavelength of LASER using diffraction grating.

**Experiment - III**

Determination of the planks constant by PHOTO CELL.

**Experiment - IV**

  
MGU, NLG, TS

  
CHAIRPERSON  
Board of Studies In  
Computer Science & Engineering  
Mahatma Gandhi University, NLG-508 254

To determine specific rotatory power of a given solution by using Laurent's Half shade polarimeter.

**Experiment - V**

To Estimate Radius of curvature of given lens by forming Newton's rings.

**Experiment - VI**

To determine resolving power of plane grating.

**Experiment - VII**

Determination of carrier concentration, Mobility and Hall Coefficient of Ge Crystal using Hall Effect Experiment.

**Experiment - VIII**

To draw the I-V Characteristics of P-N Junction diode and to evaluate the value of potential barrier of the diode.

**Experiment - IX**

To find the values of Electrical conductivity and energy gap of Ge crystal by Four probe method.

**Experiment - X**

To determine the constants of A, B and  $\alpha$  of given Thermistor.

**Experiment - XI**

To study characteristics of Solar Cell

**Experiment - XII**

To draw the I-V characteristics of Zenor diode.

ES 251 CS	Programming for Problem Solving Lab					
Pre-requisites			L	T	P	C
			-	-	2	1
Evaluation	SEE	60 Marks	CIE		40 Marks	

**Course Objectives:**

- To use tools available under LINUX for C programming.
- To gain hands-on experience on basic constructs of C programming.
- To formulate problems and implement algorithmic solutions in C.
- To write modular programs in C using structure programming techniques and data files.

**Course Outcomes:**

On completion of this course, the student will be able to:

- Write compile and debug C programs in Linux environment.
  - Write simple programs using control structures, user defined functions and data manipulation using arrays.
  - Use standard C library functions to develop modular programs in C.
1. Introducing to programming Environment(Linux commands, editing tools such as vi editor, sample program entry, compilation and execution )
  2. Write programs using arithmetic, logical, bitwise and ternary operators.
  3. Write programs simple control statements : Roots of a Quadratic Equation, extracting digits of integers, reversing digits ,finding sum of digit ,printing multiplication tables, Armstrong numbers, checking for prime, magic number,
  4. Sin x and Cos x values using series expansion
  5. Conversion of Binary to Decimal, Octal, Hexa and Vice versa
  6. Generating a Pascal triangle and Pyramid of numbers
  7. Recursion: Factorial, Fibonacci, GCD
  8. Finding the maximum, minimum, average and standard deviation of given set of numbers using arrays

9. Reversing an array ,removal of duplicates from array
10. Matrix addition , multiplication and transpose of a square matrix .using functions
11. Bubble Sort, Selection Sort ,
12. Programs on Linear Search and Binary Search using recursion and iteration
13. Functions of string manipulation: inputting and outputting string , using string functions such as strlen( ),strcat( ),strcpy( ).....etc
14. Writing simple programs for strings without using string functions.
15. Finding the No. of characters, words and lines of given text file
16. File handling programs : student memo printing
17. Create linked list, traverse a linked list, insert a node, delete a node, reversing list

ES 251 EE	BASIC ELECTRICAL ENGINEERING LAB				
Pre-requisites		L	T	P	C
		-	-	2	1
Evaluation	SEE	60 Marks	CIE	40 Marks	

**Course Objectives:**

- To understand the fundamentals of DC and AC electrical circuits.
- To understand the working principles of DC motor, DC generator, Transformers and single phase induction motors.
- To understand working principles of protection devices used in electrical circuits.

**Course Outcomes:**

On completion of this course, the student will be able to :

- Get an exposure to common electrical components and their ratings. Make electrical connections by wires of appropriate ratings.
- Understand the usage of common electrical measuring instruments.
- Analyze the performance of AC and DC circuits with appropriate operating Conditions.
- Understand the basic characteristics of transformers and electrical machines.
- Obtain the overall understanding of basic electrical circuits and appliances required for any industry.

**Suggested List of Laboratory Experiments/Demonstrations:**

**I - Cycle**

**Demonstration:** Basic safety and precautions -

Introduction and use of measuring Instruments

Exp 1. Verification of Kirchhoff's Laws

Exp 2. Verification of Thevenin's & Norton's Theorems

Exp 3. Steady-state and transient time-response of R-C circuit to a step change in voltage.

- Exp 4. Sinusoidal steady state response of R-L and R-L-C circuits- impedance calculation and verification
- Exp 5. Measurement of three-phase power in balanced three-phase circuits using Two-Wattmeter method

## II- Cycle

**Demonstration:** cut-out sections of machines: DC machine, induction machine, synchronous machine and single-phase machine

- Exp 6. Load test on single phase transformer: Measurement of primary and secondary voltages, currents and power
- Exp 7. Three-phase Transformer: Star and Delta connections. Voltage and current relationship
- Exp 8. Torque-speed characteristics of separately excited DC motor
- Exp 9. Synchronous speed of two-pole and four-pole, three-phase induction motor, Speed reversal by change of phase-sequence
- Exp 10. Magnetization curve of a separately excited DC Generator

ES 251 ME	WORKSHOP PRACTICE					
Pre-requisites			L	T	P	C
			-	-	6	3
Evaluation	SEE	60 Marks	CIE		40 Marks	

### Course Objectives :

- To learn about different tools used in workshop.
- To understand the different manufacturing processes.
- To learn about fabrication of components using different materials.

### Course Outcomes :

On completion of this course, the student will be able to :

- Study and practice on tools and their operations of different trades.
- Practice on manufacturing of components using workshop trades including carpentry, fitting, foundry, smithy, sheet metal & welding
- Select suitable tools for machining process including facing, turning & knurling
- Attain basic electrical knowledge for house wiring practice

### LIST OF EXPERIMENTS:

#### 1. Carpentry shop

Making of Cross lap joint with Wood,  
Making of End Lap/Tee Lap Joint with wood

#### 2. Fitting shop

Making of Step cut with Mild Steel flat,  
Making of semicircular and V-cut with Mild Steel flat

#### 3. Sheet metal shop

Making of Funnel with GI Sheet,  
Making of Rectangular box with GI Sheet

#### 4. House wiring

Making of Cleat wiring,

Making of casing wiring

**5. Welding shop**

Making of Butt joint using Arc Welding,

Making of Lap Joint using Arc Welding

**6. Machine shop**

Making of Step turning on MS cylindrical rod,

Making of Taper turning on MS cylindrical rod

**7. Foundry shop**

Preparation of casting using single piece pattern,

Preparation of casting using core pattern

**8. Smithy shop**

Forging of square shape peg from cylindrical work piece,

Forging of square shape L- bend peg from cylindrical work piece

**Suggested Reading:**
